

# Bunny Basics!

## Housing

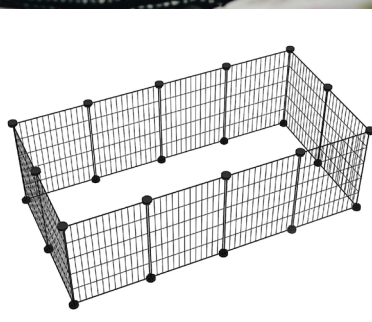

Rabbits are indoor pets, but not just any enclosure will do. There are a few different options for rabbit housing.

Bunny condos

Bunny-proofed room

Free range indoor living

Large x pens

## Every rabbit environment needs:

### A solid floor

Enclosures with wire or mesh floors can cause serious injuries to a rabbit's feet

### A space to hide and perch

Try a hide-and-perch box, or a multi-level enclosure

### Comfortable bedding

Rabbit shavings, shredded paper or blankets

### A litter box

Did you know rabbits can be fully litter trained? This helps with free-roaming rabbits

### Hay, lots of hay

Hay is essential for maintaining a rabbit's teeth

### Food and water

A rabbit should have access to fresh water at all times, and fresh food daily

### Controlled temperature

Rabbits are very sensitive to heat stroke. Enclosures should be below 80F and well-ventilated

## How big should a rabbit enclosure be?

A rabbit's enclosure should be **at least** four times the size of your rabbit, but the bigger the better!
